2. UNPACKING AND PREPARATION

1

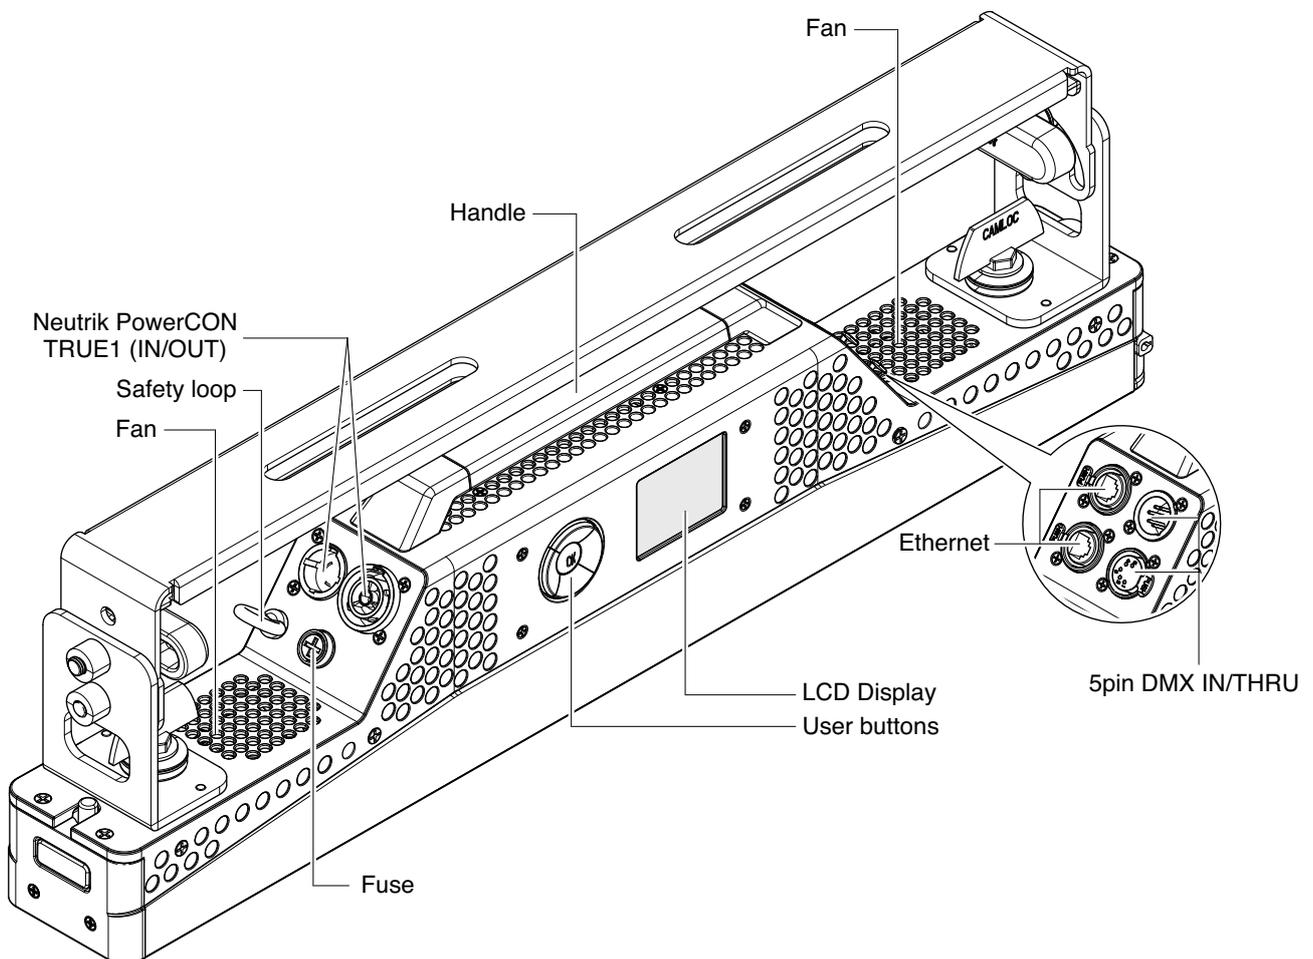

Packing contents - Fig. 1

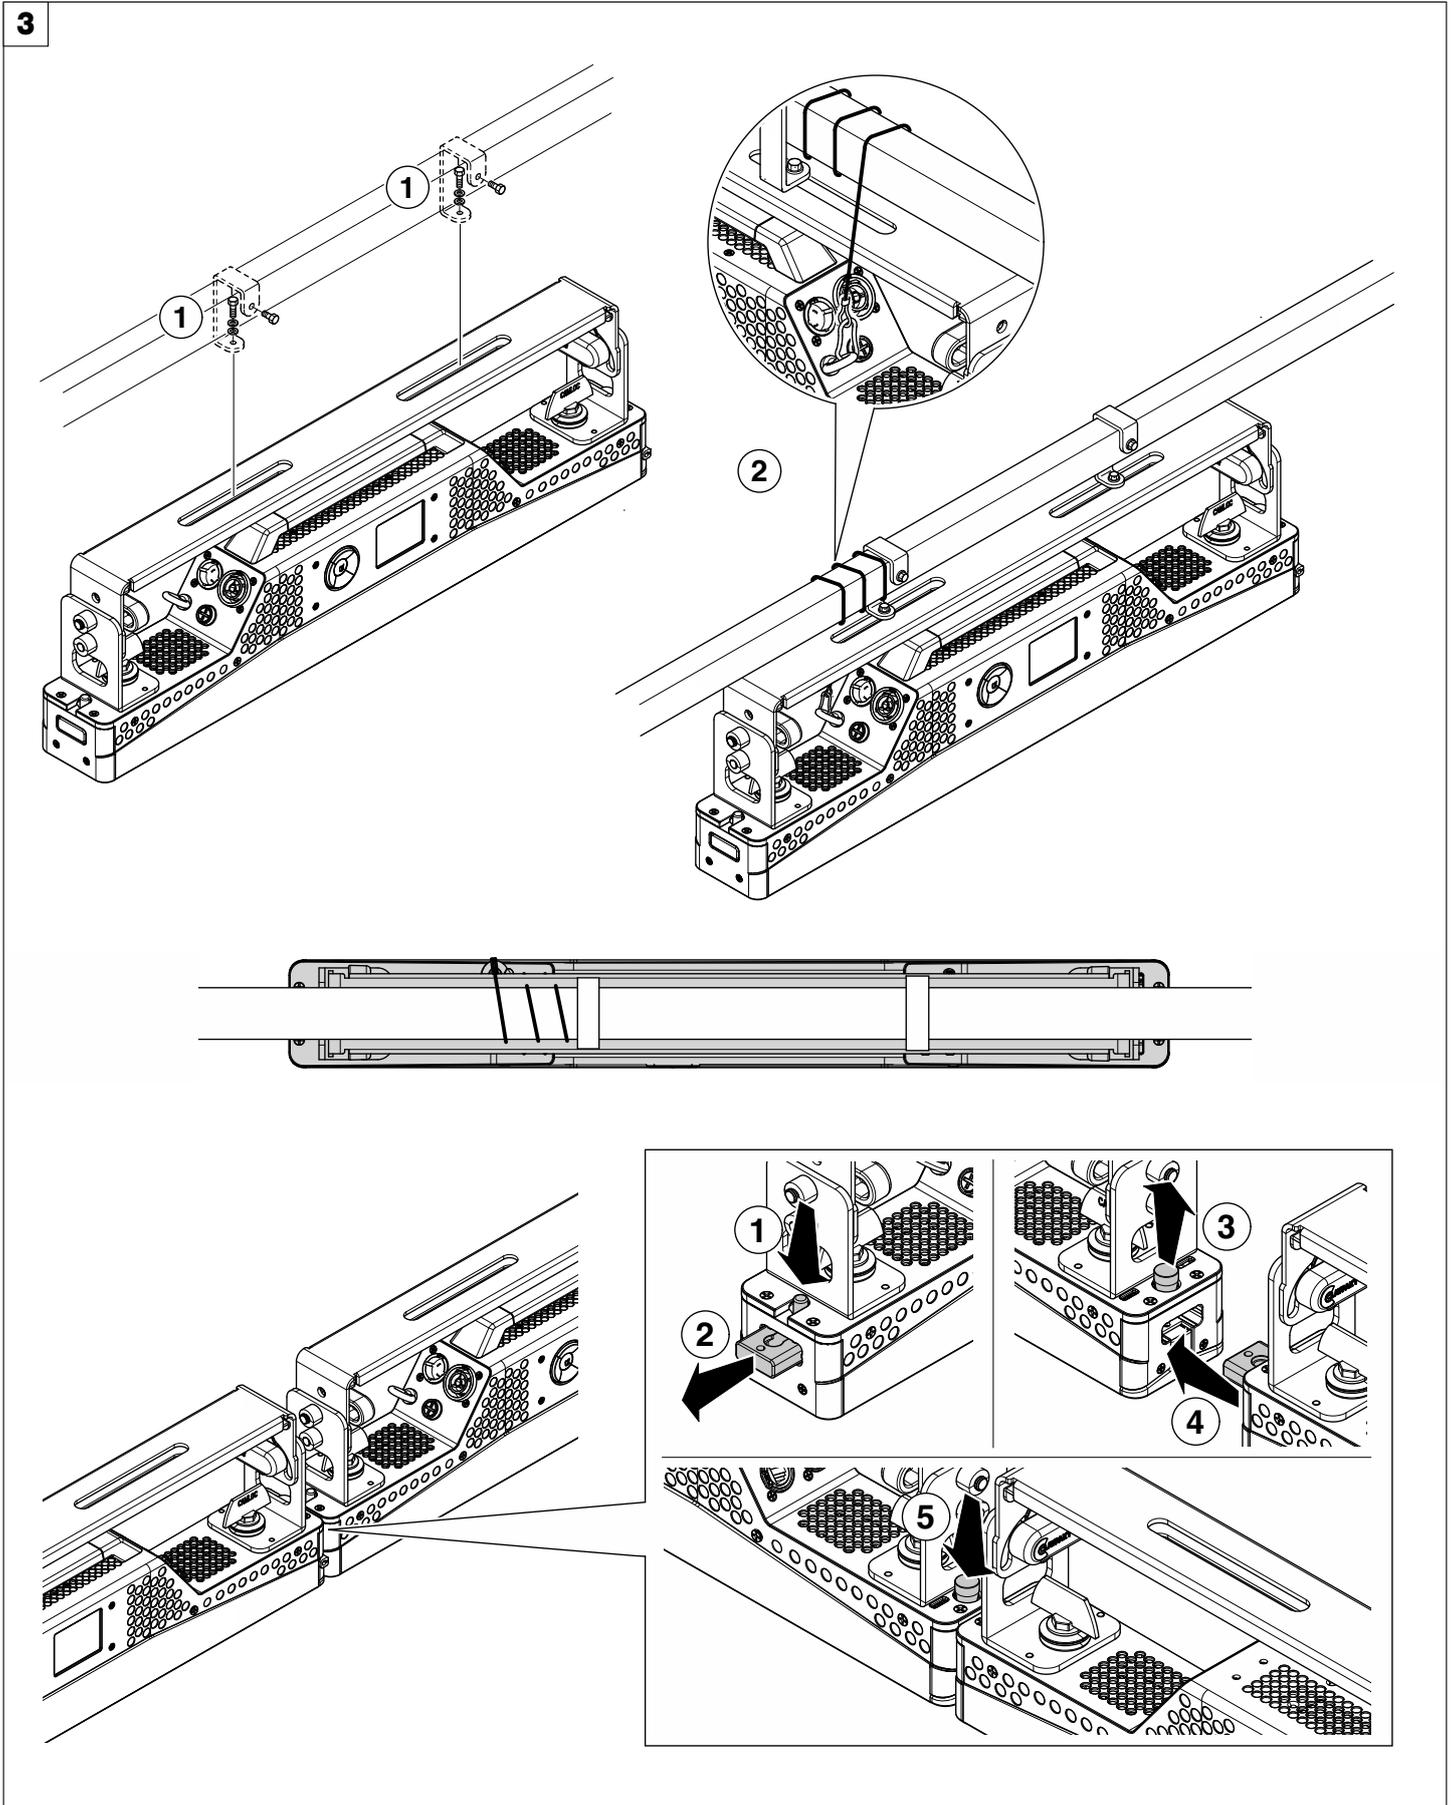

3. INSTALLATION AND START-UP

3.1 Fixture overview

2

3.2 Installing the fixture

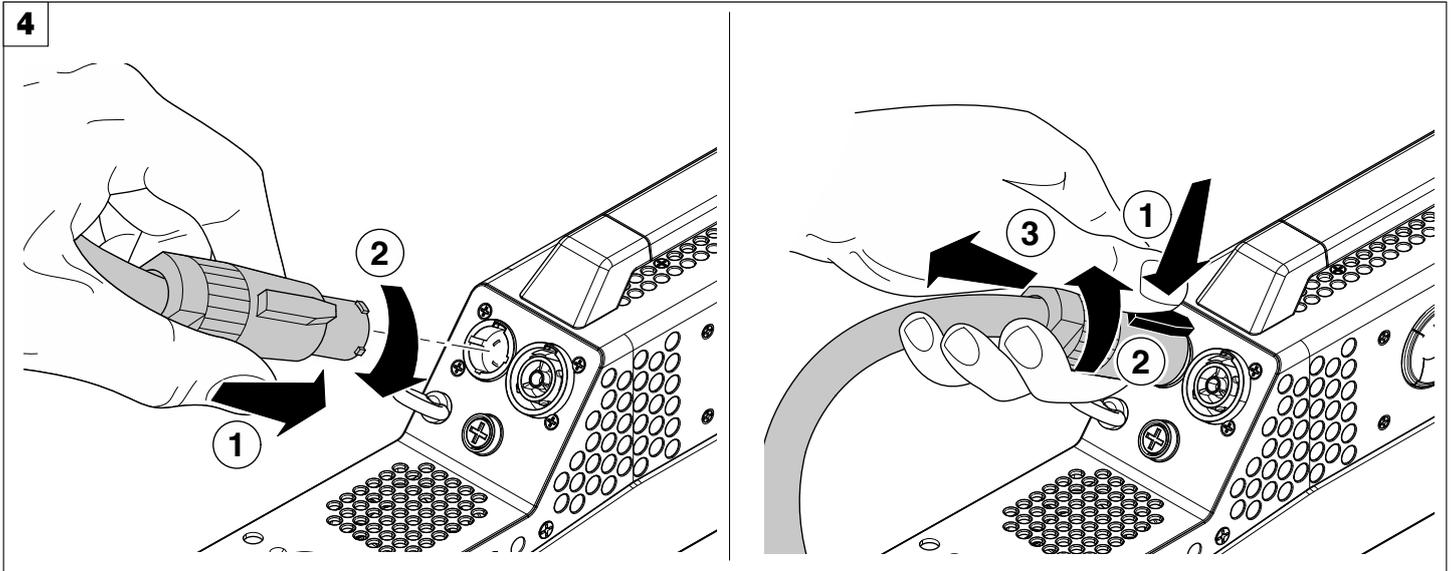

Projector installation - Fig. 3

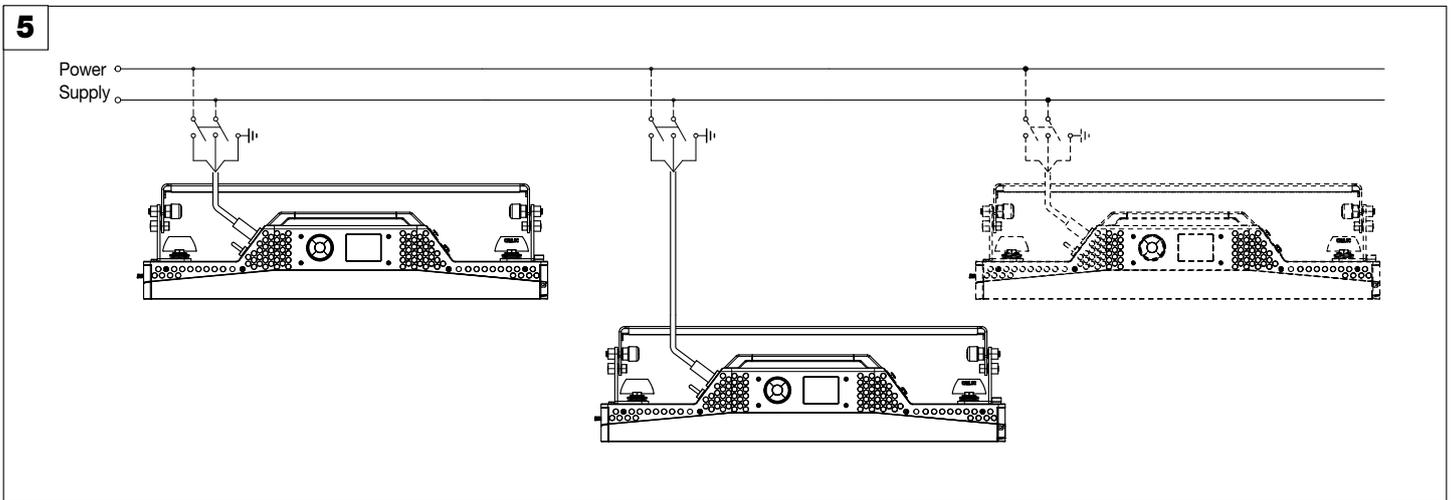

The projector can be installed on the floor resting on specific rubber feet, on a truss, on the ceiling or wall.

WARNING: the safety chain must be installed except when the projector rests on the floor. (Code 105041-003 available upon request). This must be secured to the projector support structure and then hooked to the fastening point at the centre of the fixture.

3.3 Connecting to mains supply

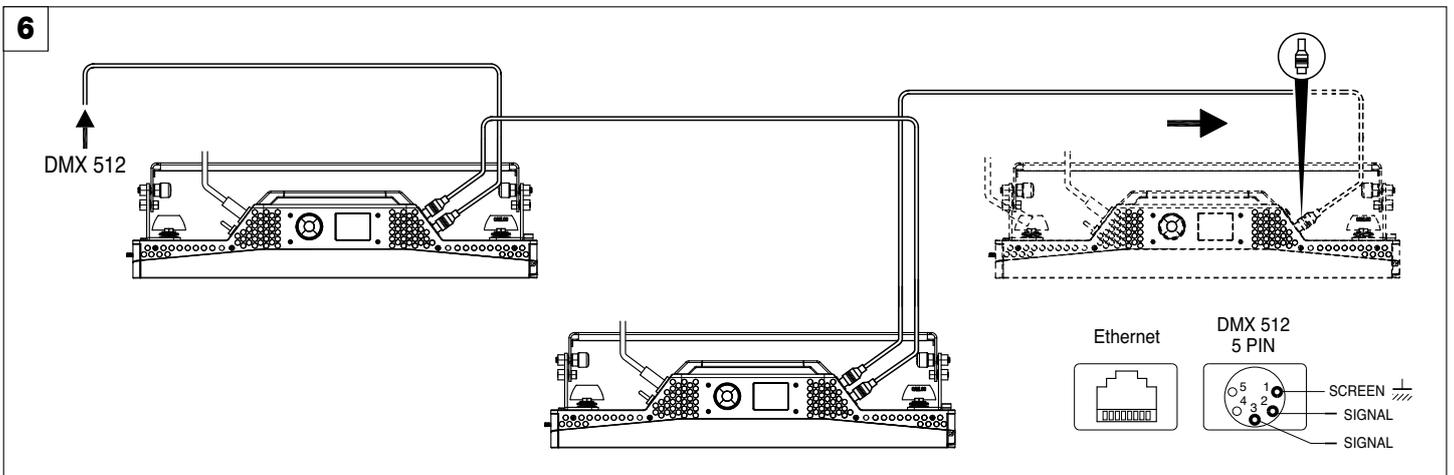

Connecting and disconnecting the power cord - Fig. 4

Connections to the power mains - Fig. 5

3.4 Connecting the control signal line: DMX / Art-Net

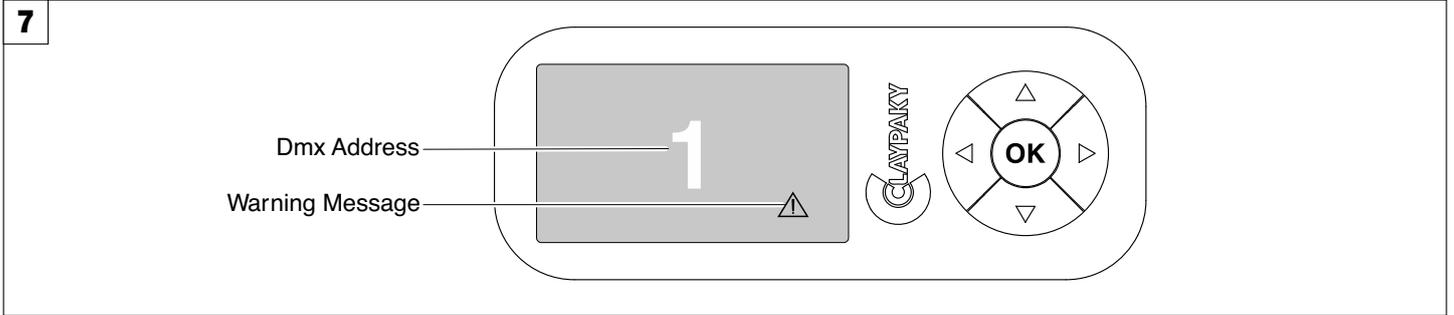

Connections to the control signal line (DMX) - Fig. 6

Use a cable conforming to specifications EIA RS-485: 2-pole twisted, shielded, 120Ω characteristic impedance, 22-24 AWG, low capacity. Do not use microphone cable or other cable with characteristics differing from those specified. End connections must be made using XLR type 5-pin male/female connectors. A terminating plug must be inserted on the last projector with a resistance of 120 (minimum 1/4 W) between terminals 2 and 3.

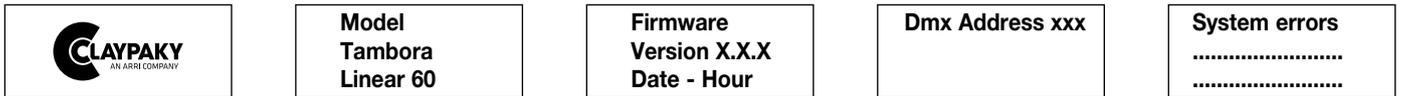

IMPORTANT: The wires must not make contact with each other or with the metal casing of the connectors. The casing must be connected to the shield braid and pin 1 of the connectors.

3.5 Switching on the fixture and basic SetUp

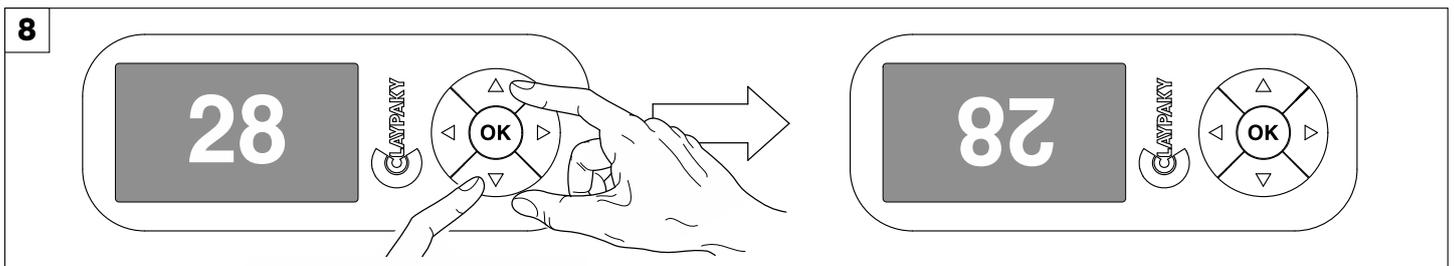

Switching on the projector - Fig. 7

Switch-on the fixture. The projector starts resetting the effects. At the same time, the following information scrolls on the display:

The control panel (Fig. 7) has a display and buttons for the complete programming and management of the projector menu. The display can be in one of two conditions: rest status and setting status. When it is in the rest status, the display shows the projector's DMX address.

During menu setting status, after a wait time (about 30 seconds) without any key having been pressed, the display automatically returns to rest status. It should be noted that when this condition occurs, any possible value that has been modified but not yet confirmed with the **OK** key will be cancelled.

Reversal of the display - Fig. 8

To activate this function, press UP **▲** and DOWN **▼** keys simultaneously while the display is in the rest mode. This status will be memorised and maintained even for the next time it will be switched on. To return to the initial state, repeat the operation all over again.

Setting the projector starting address

On each projector, the starting address must be set for the control signal (addresses from 1 to 512).

The address can also be set with the projector switched off.

Functions of the buttons - Using the menu

		Confirms the displayed value, or activates the displayed function, or enters the successive menu.
	 DOWN	Decreases the value displayed (with auto-repetitions) or passes to the next item in the menu.
	 UP	Increases the value displayed (with auto-repetitions) or passes to the previous item in a menu.
	 LEFT	Return to the top level
	 RIGHT	Enters the successive menu

USING THE MENU:

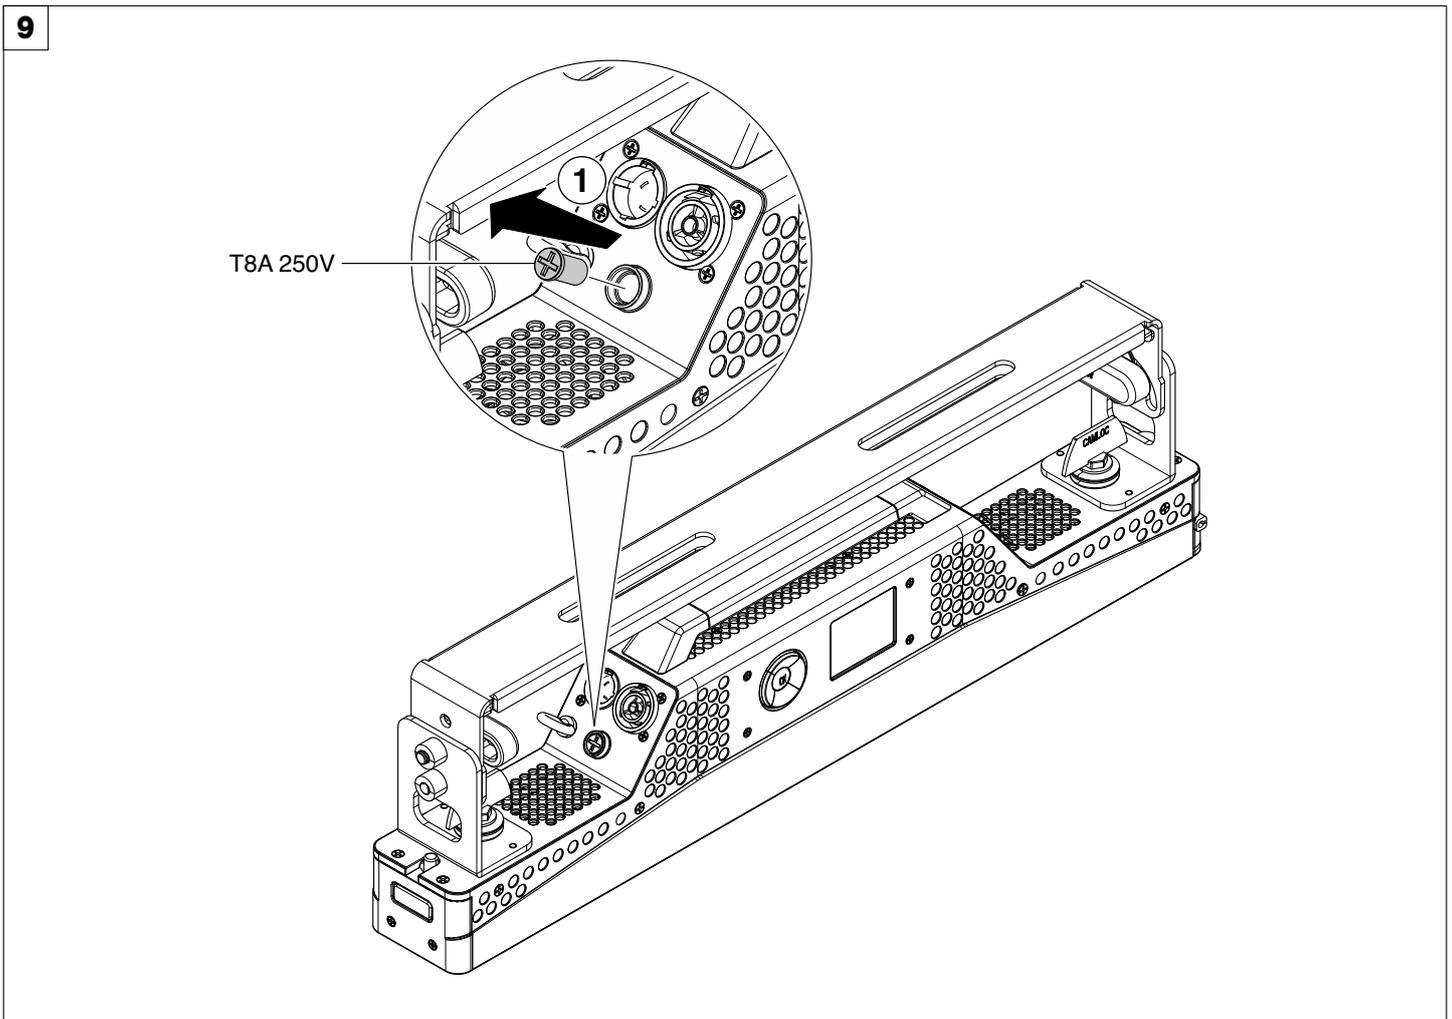

- 1) Press LEFT  once – “Main Menu” appears on the display.
- 2) Use the UP  and DOWN  keys to select the menu to be used:
 - Setup (Setup Menu): To set the setting options.
 - Option (Option Menu): To set the operating options
 - Informations (Informations Menu): To read the counters, software version and other information.
 - Manual Control (Manual control Menu): To trigger the test and manual control functions.
 - Test (Test Menu): To check the proper functioning of effects
 - Advanced (Advanced Menu): Access to the "Advanced menu" is recommended for a trained technical personnel.
- 3) Press  to display the first item in the selected menu.
- 4) Use the UP  and DOWN  keys to select the MENU items.

Setting addresses and options with the projector disconnected

The projector's DMX address, as well as other possible operating options, can also be set when the appliance is disconnected from the electricity supply. All that is needed is to press RIGHT  to momentarily activate the display and thus access the settings. Once the required operations have been carried out, the display will switch off again after a wait time of 30 seconds.

4. MAINTENANCE

4.1 Fuse replacing

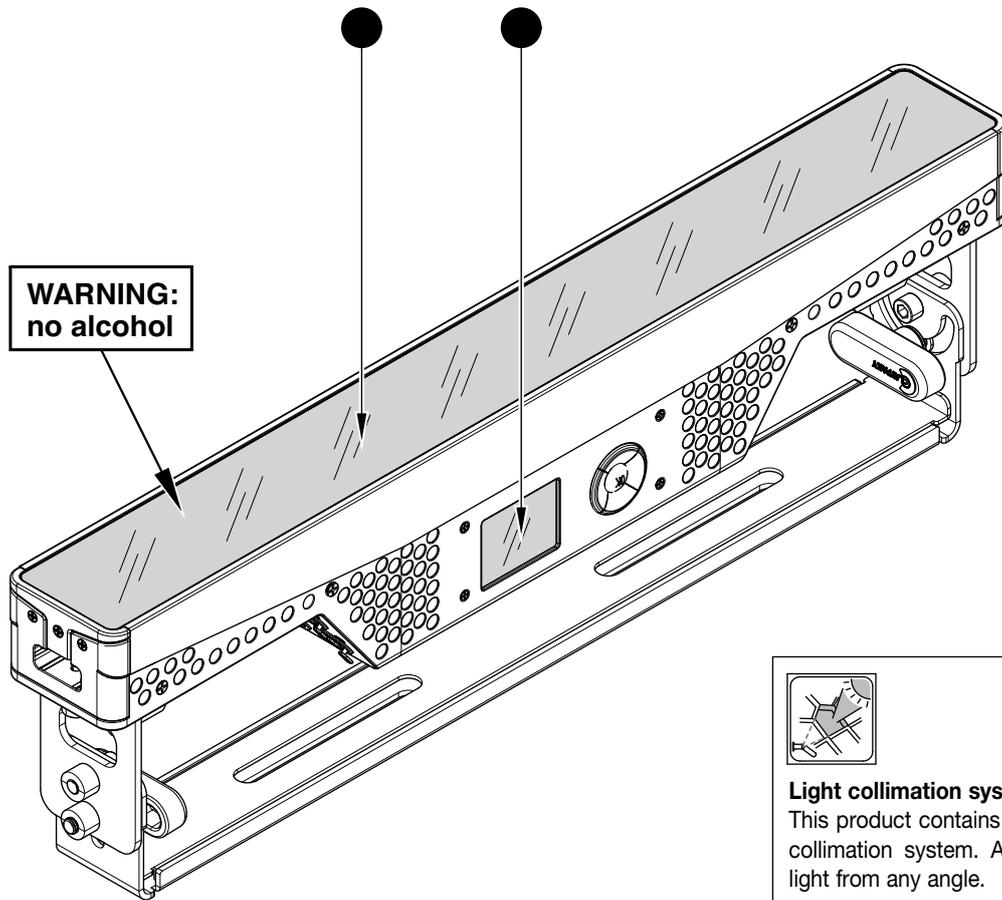

Fuse replacing - Fig. 9

Each Tambora Linear 60 has 1 fuse T8A 250V, associated with the main power cord connection.

4.2 Periodical cleaning & Caution

10

● Parts requiring frequent cleaning.

CAUTION:

- To ensure optimal operation and performance for a long time it is essential to periodically clean the parts subject to dust and grease deposits. The frequency with which the following operations are to be carried out depends on various factors, such as the amount of the effects and the quality of the working environment (air humidity, presence of dust, salinity, etc.).

It is recommended that the projector undergoes an annual service by a qualified technician for special maintenance involving at least the following operations:

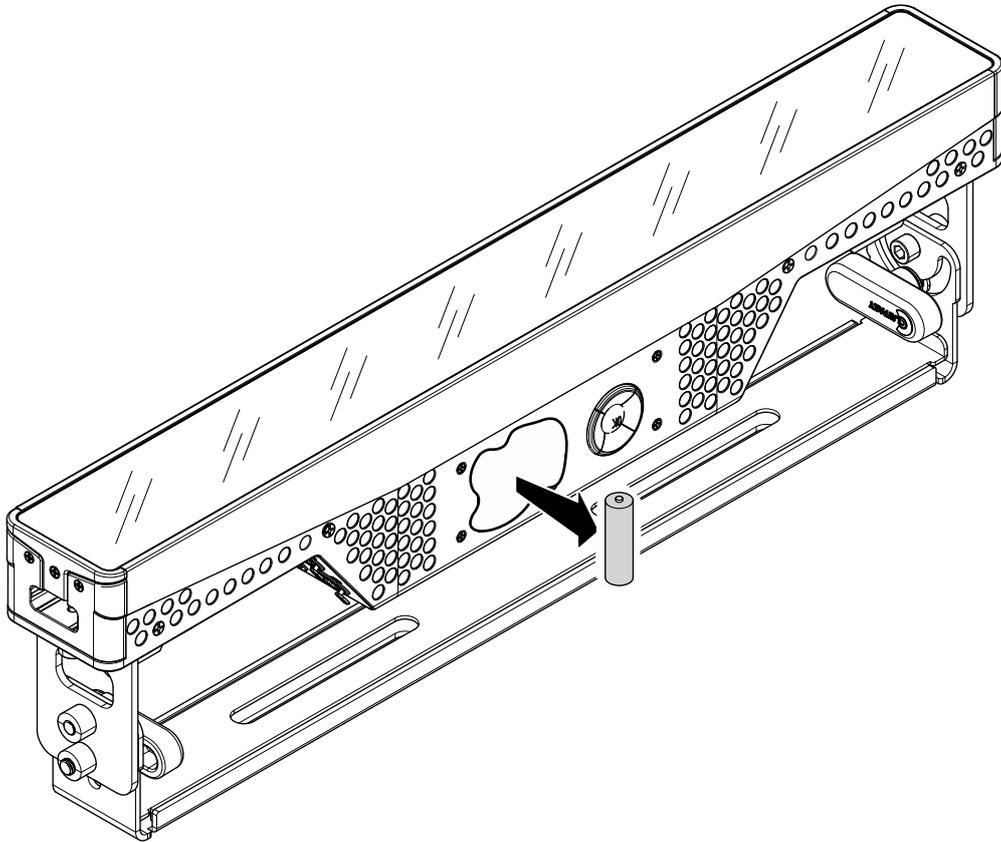

- General cleaning of internal parts.
- General visual check of the internal components, cabling, mechanical parts, etc.
- Electrical, photometric and functional checks; eventual repairs.

Cleaning the LED cover

Only use neutral soap and water to clean the LED cover, then dry it carefully with a soft, non-abrasive cloth. (WARNING: the use of alcohol or any other detergent could damage the LED cover).

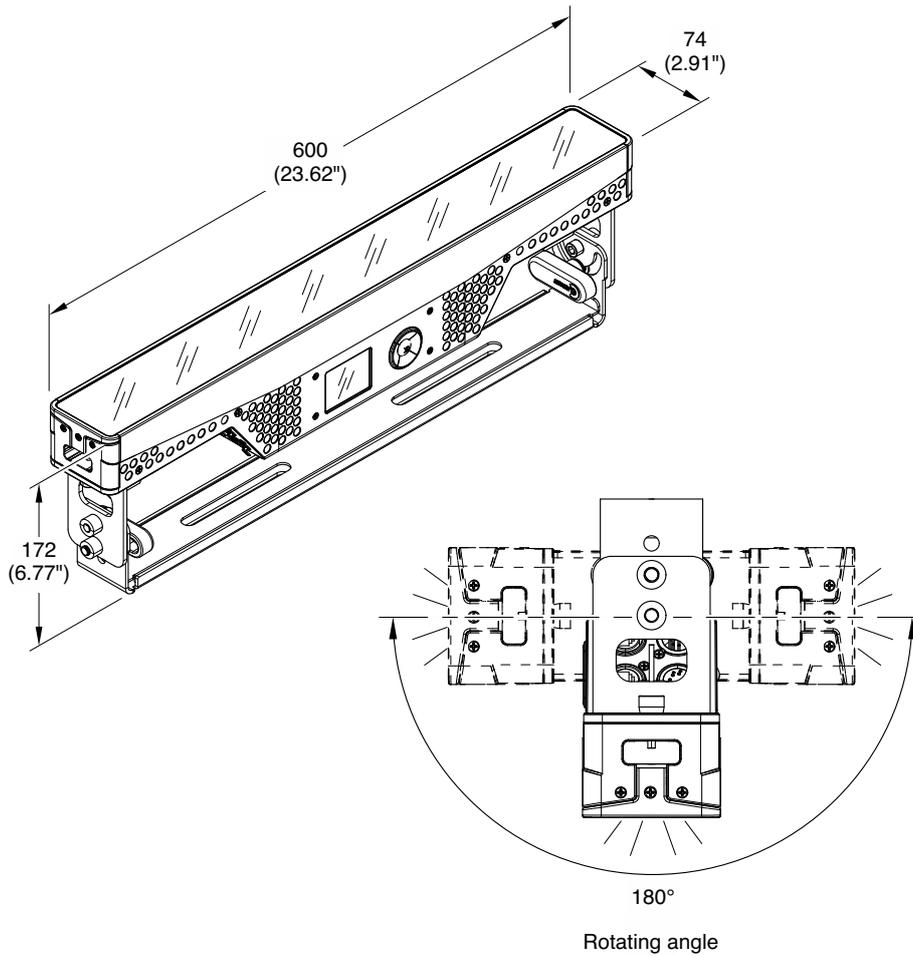

4.3 Battery removal

11

This product contains a rechargeable battery. To preserve the environment, please dispose the battery at the end of its life according to the regulation in force.

5. DIMENSIONS

6. CAUSE AND SOLUTION OF PROBLEMS

THE PROJECTOR WILL NOT SWITCH ON			TROUBLE
ELECTRONICS NON-OPERATIONAL			
DEFECTIVE PROJECTION			
REDUCED LUMINOSITY			
	POSSIBLE CAUSES	CHECKS AND REMEDIES	
●	No power supply.	Check the power supply voltage.	
●	● LED burnt out or defective.	Call an authorised technician.	
●	Signal transmission cable faulty or disconnected.	Replace the cables.	
●	Incorrect addressing.	Check addresses (see instructions).	
●	Fault in the electronic circuits.	Call an authorised technician.	
●	Optic fault.	Call an authorised technician.	
● ●	Dust or grease deposits.	Clean (see instructions).
